## Forward proxy

Forward proxy is a server that acts as an intermediary between a client and a destination server. It receives requests from the client and forwards them to the destination server. The destination server then returns the response to the proxy, which then forwards it back to the client. This process is used to hide the client's IP address and to filter traffic.

Forward proxy is a server that acts as an intermediary between a client and a destination server. It receives requests from the client and forwards them to the destination server. The destination server then returns the response to the proxy, which then forwards it back to the client. This process is used to hide the client's IP address and to filter traffic.

Forward proxy is a server that acts as an intermediary between a client and a destination server. It receives requests from the client and forwards them to the destination server. The destination server then returns the response to the proxy, which then forwards it back to the client. This process is used to hide the client's IP address and to filter traffic.

## Reverse proxy

Reverse proxy is a server that acts as an intermediary between a client and a destination server. It receives requests from the client and forwards them to the destination server. The destination server then returns the response to the proxy, which then forwards it back to the client. This process is used to hide the destination server's IP address and to filter traffic.

Reverse proxy is a server that acts as an intermediary between a client and a destination server. It receives requests from the client and forwards them to the destination server. The destination server then returns the response to the proxy, which then forwards it back to the client. This process is used to hide the destination server's IP address and to filter traffic.
