

DevOps je proces, který umožňuje efektivněji vyvíjet a spravovat softwarové aplikace. Klíčové prvky zahrnují automatizaci, spolupráci mezi vývojáři a operačními pracovníky, rychlé uvolňování verzí a řešení problémů. Tento přístup pomáhá snížit riziko chyb a zlepšit kvalitu produktu.

DevOps – IT-Department

DevOps – IT-Department is a methodology for managing the software development process. It combines software development and IT operations, with the goal of reducing the time between releasing new software and detecting and fixing production issues. DevOps is a cultural shift, not just a set of tools. It requires a change in mindset and a focus on collaboration and communication between development and operations teams. The goal is to create a continuous flow of software from development to production, with frequent releases and a focus on quality and reliability. DevOps is a key component of modern software development and is essential for organizations that want to stay competitive in a fast-paced market.
